Art Unit: 3725

Attachment to PTO-303

The Applicant response is treated by the examiner as follows:

1. Upon further review and based on the amendment filed on 12/14/09, the objection to the specification on the ground that it does not provide proper antecedent

basis for the claimed subject matter has been withdrawn (see also applicants remarks).

2. Upon further review and based on the amendment filed on 12/14/09, the

rejection under 35 U.S.C. 112, first paragraph on the ground that failing to comply with

the enablement requirement and written description requirement have been withdrawn

(see also applicants remarks).

3. In response to applicant's argument that Ohnishi, as shown in Fig. 2,

describes a conical member used as a projected central area (17). The axis of the

conical member is parallel to a longitudinal axis of the venturi nozzle, the examiner

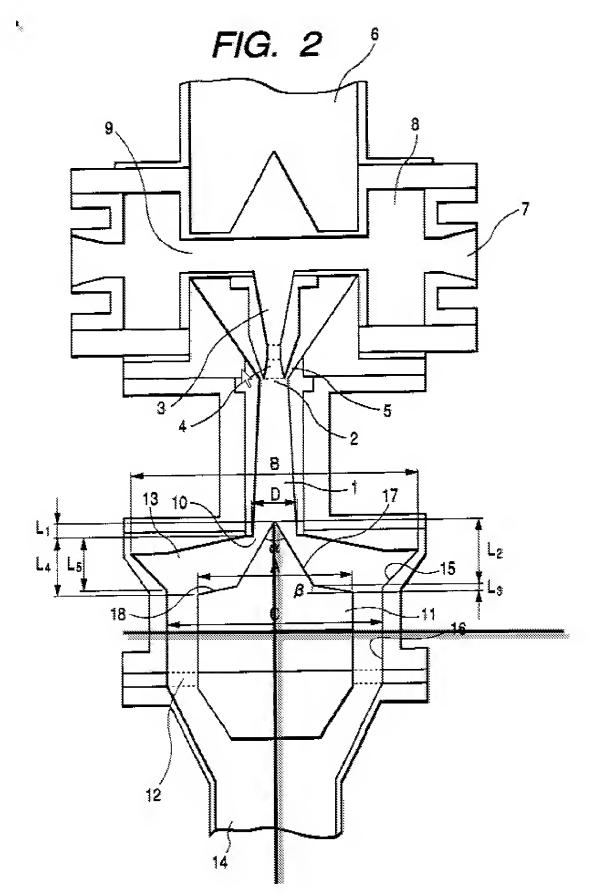

would like to point out that both Fig 2 of the Ohnishi reference and the prior art shown

on Figs 20 in Ohnishi reference inherently have two axis one of which is parallel to the

longitudinal axis of the venture nozzle and the other one transverse to the longitudinal

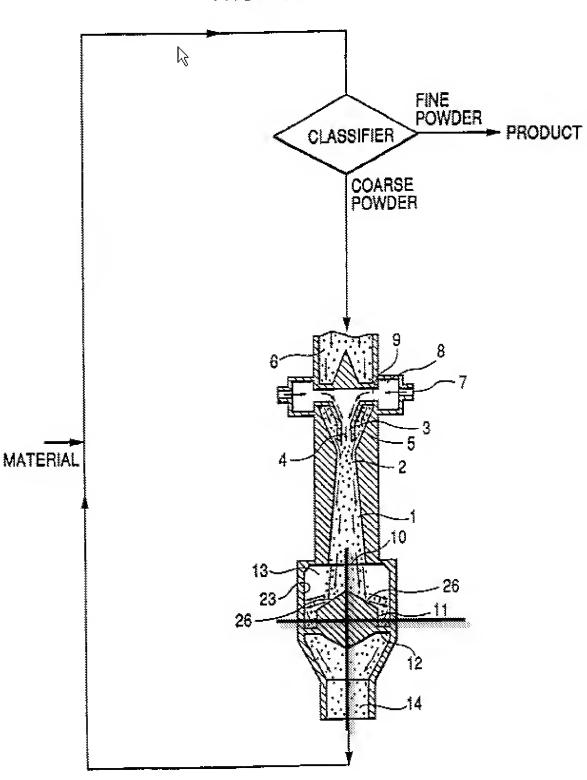

axis of the venturi nozzle and shown below.
